Our A.S. in Magnetic Resonance Imaging Program prepares our students to use specialized MRI equipment to create images of structures inside the human body. MRI Technologists must be able to interact compassionately and effectively with people who range from healthy to critically ill. The MRI Technologist will be supervised by board certified radiologists, but will be provided responsibility and independence in the performance of their duties. This program is designed to prepare the student to perform clinical MRI examinations of the human body with special consideration to image production, quality control, signal to noise ratio, and basic pulse sequences. Our graduates will receive the necessary knowledge and skills to transition from education to employment.
Our A.S. in MRI Program provides didactic training and a clinical internship component that correlates with the theoretical knowledge. Upon successful completion of the program, students will be prepared to sit for the ARMRT and ARRT (MR) exams and work as MRI Technologists in hospitals or medical clinics.

Our Program Curriculum provides students with the technical, clinical, and interpersonal skills necessary to succeed in this field. Subjects covered include Patient Care, Sectional Anatomy, Physical Principles of MRI, Protocols and Procedures, Safety, Physics, Pathology in Diagnostic Imaging, Medicolegal Considerations in Healthcare, Computers in Imaging and others.

Our Clinical Education (Internship) is an integral part of the A.S. in MRI Program that facilitates the development of student competence with clinical skills. Internship will be provided for all of our students.
